

Vitis 'Jumbo' - Muscadine

As Big as Plums!

The name says it all. Jumbo is a huge black grape with an especially vigorous vine. 16% sugar. Ripens September into October. Female grape needs a self fertile grape variety to pollinate it. Zones 7-10.

Plant Highlights

- **Female Only**
- Easy to Grow
- Can be Containerized
- Extra Large Fruit

Most Southerners have picked muscadine grapes growing in the wild as children. Sometimes called Scuppernongs or fox grapes. These spicy-sweet, thick-skinned grapes are an old Southern favorite and can still be found growing wild throughout the lower South. They thrive with little care, and the vines remain productive for 100 years! Modern breeding has brought us a wonderful range of varieties: wine grapes for the home vintner and jelly maker, plus delicious fresh-eating varieties, which can be as large as golf balls! Some muscadine grapes are self pollinating, while the female varieties need a self-pollinating variety to help them set fruit.

Varieties are either self fertile, meaning they will bear without another grape close by or females. The females need to have a self fertile variety within 30 foot to bear a crop. If you want only one grape, choose a self-pollinating variety. Choose at least one self-pollinating grape to pollinate up to four females. If you are planting several rows of female muscadine grapes, ideally every third grape in a row should be self-fertile to pollinate adjacent female plants.

Landscaping with Grape Vines.....

Grapes add a touch of old world charm to any landscape. With large, lush leaves and gnarled, shaggy-barked trunks, grapes are particularly attractive with clusters of fruit hanging down through the foliage. Use them on fences to divide areas or create hidden gardens within your larger landscape picture. Train them over a patio for a living roof that's cool and shady, but drops its leaves in the winter to let the warm sun in. They can also be trained into small weeping trees for interesting accents in the border or in a large container.

EXPOSURE: · Full Sun, · Partial Sun

SOIL MOISTURE: · Moist, Well-Drained

TYPE: · Self-Fertile · Bronze

HABIT: · Vining

BLOOMS: · Spring

FRUITING SEASON: · Summer

CHILLING REQUIREMENT: · 100 Hours

FEATURES: · Low Maintenance

PURPOSE: Food Production, Aesthetics/Décor', Health

APPLICATIONS: Arbors, Edible Garden ,
Patio & Garden, Trellis , Espalier ,
Commercial Food Production

COMMERCIAL MARKET: · Fresh, Wine, Juice,
Jams & Jellies
